Course outline

About NPTEL ()

How does an NPTEL online course work? ()

Week 1 ()

Week 2 ()

- Introduction to Anaconda (unit?unit=37&lesson=38)
- Installation of Anaconda (unit?unit=37&lesson=39)
- Introduction to Spyder IDE (unit?unit=37&lesson=40)
- Printing statements in Python (unit?unit=37&lesson=41)
- Understanding Variables in Python (unit?unit=37&lesson=42)
- Executing a sequence of instructions in the Console (unit?unit=37&lesson=43)
- Writing your First Program (unit?unit=37&lesson=44)
- Taking inputs from the user (unit?unit=37&lesson=45)
- Discount Calculation (unit?unit=37&lesson=46)
- Motivation to if condition (unit?unit=37&lesson=47)
- A reminder on how to deal with numbers (unit?unit=37&lesson=48)
- Understanding if condition's working (unit?unit=37&lesson=49)

Week 2 : Assignment 2

The due date for submitting this assignment has passed.

Due on 2025-02-05, 23:59 IST.

Assignment submitted on 2025-02-05, 22:11 IST

1) **Statement:** If a variable is assigned a value once, the value in the variable cannot be changed in the variable. ***1 point***

- False, the variable stores all values it was assigned.
- False, the variable stores the value from the latest assignment.
- True, the variable stores only the value from the second-last assignment.
- True, the variable stores value from the initial assignment only.

Yes, the answer is correct.
Score: 1

Accepted Answers:
False, the variable stores the value from the latest assignment.

2) Which of the following code blocks print - ”Ramesh talks to Suresh and Kamlesh” ? ***1 point***

```
print("Ramesh talks to Suresh and Kamlesh")
```

```
print("Ramesh talks to " + "Suresh" + " and", "Kamlesh")
```

```
print("Ramesh talks to Suresh", "and", "Kamlesh")
```

```
print("Ramesh talks to" + "Suresh and Kamlesh")
```

No, the answer is incorrect.
Score: 0

Accepted Answers:

```
print("Ramesh talks to Suresh and Kamlesh")
```

```
print("Ramesh talks to " + "Suresh" + " and", "Kamlesh")
```

```
print("Ramesh talks to Suresh", "and", "Kamlesh")
```

3) What aren’t the correct ways to inform python that input is a decimal point number ? ***1 point***

- in(input())
- float(input())
- int(input())
- a = input()
  a = int(a)

Yes, the answer is correct.
Score: 1

Accepted Answers:
in(input())
int(input())
a = input()
a = int(a)

- Realizing the importance of syntax and indentation (unit?unit=37&lesson=50)
- Introductions to loops (unit?unit=37&lesson=51)
- Loops: Sum of numbers (unit?unit=37&lesson=52)
- Loops: Sum of numbers (continued) (unit?unit=37&lesson=53)
- Loops: Multiplication Tables (unit?unit=37&lesson=54)
- Introduction to While Loop (unit?unit=37&lesson=55)
- Week 2 Feedback Form: The Joy of Computing using Python (unit?unit=37&lesson=56)
- **Quiz: Week 2 : Assignment 2 (assessment?name=503)**
- Week 2: Programming Assignment 1 (/noc25_cs69/progassignment?name=504)
- Week 2: Programming Assignment 2 (/noc25_cs69/progassignment?name=505)
- Week 2: Programming Assignment 3 (/noc25_cs69/progassignment?name=506)

Problem Solving Session - Jan 2025 ()

4) The following program outputs 723 - ***0 points***

```
def mystery(container):
  result = []
  for i in range(len(container)):
    if i % 2 != 0:
      result.append(container[i] * 4)
    else:
      result.append(container[i] * (-1))
  return result
```

For what value of **a** does the code output 123 ?

- 1
- 2
- 6
- 5

No, the answer is incorrect.
Score: 0

Accepted Answers:
6

5) What does previous question calculate ? ***0 points***

- Calculates the factorial of **a.**
- Calculates the factorial of **a-1** and adds 3
- Calculates the factorial of **a-1+3.**
- Calculates the **a** multiples of **a** starting from **1** and adds 3.

Yes, the answer is correct.
Score: 0

Accepted Answers:
*Calculates the factorial of **a-1** and adds 3*

6) Which loop is used to perform a set of repetitive tasks without a condition by default in Python? ***1 point***

- **while** loop
- **for** loop
- **do-while** loop
- **while-range** loop

Yes, the answer is correct.
Score: 1

Accepted Answers:
***for** loop*

7) What happens when the condition inside the **if** and **while** evaluate to false ? ***1 point***

- Python interpreter ignores the **if/while** blocks, and halts the program.
- Python interpreter ignores the **if/while** blocks, and proceeds the program from the lines after the **if/while** block.
- Python interpreter executes the **if/while** blocks, and rest of the program.
- Python interpreter executes the **if/while**, and the programs runs in an infinite loop.

No, the answer is incorrect.
Score: 0

Accepted Answers:
*Python interpreter ignores the **if/while** blocks, and proceeds the program from the lines after the **if/while** block.*

8) The following program might/might not have an infinite loop. Does the program have infinite loop ? ***0 points***

```
n = ?
k = 0
a = []
b = 0
while (n != 0):
  k = k + (n % 10)
  a.append(n % 10)
  n = n // 10
a.sort()
for i in a:
  b = b + i
if(b != k):
  print("PYTHON IS FUN")
else:
  print("PYTHON IS BORING")
```

- No, the program doesn't have infinite loop.
- Yes, it can be prevented by updating the value of **a** before the **if** block at line 3.
- Yes, it can be prevented by removing both the **if** blocks inside the while loop.

Yes, but it cannot be prevented.

No, the answer is incorrect.
Score: 0

Accepted Answers:
*Yes, it can be prevented by updating the value of **a** before the **if** block at line 3.*

9) For which of the following values of **name** and **age** variables does the following code print "You are lucky"? ***1 point***

```
name = input("Enter your name: ")
age = int(input("Enter your age: "))
flag = "False"
if age >= 18:
  flag = "True"
else:
  flag = "False"
counter = 0
for i in name:
  if ( i == "a"):
    counter += 1
if (flag == "True"):
  if (counter >= 2):
    print("You are lucky")
  else:
    print("You are not lucky")
```

- [x] aryan, 20
- [ ] arjun, 19
- [ ] aakash, 16
- [x] anand, 18

Yes, the answer is correct.
Score: 1

Accepted Answers:
aryan, 20
anand, 18

10) For which of the options among the previous question, the program doesn't print anything. ***1 point***

- ( ) aryan, 20
- (•) aakash, 16
- ( ) arjun, 19
- ( ) anand, 18

Yes, the answer is correct.
Score: 1

Accepted Answers:
aakash, 16
