Week 3 : Assignment 3

The due date for submitting this assignment has passed.

Due on 2025-02-12, 23:59 IST.

Assignment submitted on 2025-02-02, 23:33 IST

1) Which of the following is/are **false** statement(s)? ***1 point***

- [x] Lists are fixed in size, they cannot store more than 1024 values
- [x] One can access element in list by using non-numeric indices
- [ ] Iterating over lists is possible in Python
- [x] We need to specify required size of list while creating a new list variable

Yes, the answer is correct.
Score: 1

Accepted Answers:
Lists are fixed in size, they cannot store more than 1024 values
One can access element in list by using non-numeric indices
We need to specify required size of list while creating a new list variable

2) In the below code -

Week 3 Feedback Form : The Joy of Computing using Python!! (unit?unit=57&lesson=77)

- It converts any input list into a new list which is filled with some numbers which are always in increasing order
- It converts any input list into a new list such that at even indices, the value is a multiple of an even number and at odd indices, the value is either even or negative number
- (selected) It converts any input list into a new list such that at odd indices, the value is always even number and at even indices, the value is negative
- It converts any input list into a new list, which follows no pattern

Yes, the answer is correct.
Score: 1
Accepted Answers:
It converts any input list into a new list such that at odd indices, the value is always even number and at even indices, the value is negative

5) From the previous question, if the option - ***1 point***

It converts any input list into a new list such that at even indices, the value is a multiple of an even number and at odd indices, the value is either even or negative number.

is incorrect, Can you make changes to code such that it this option is always true for any input ?

- No, it is not possible to make such changes
- No, the option is already correct
- (selected) Yes, we can make changes

Yes, the answer is correct.
Score: 1
Accepted Answers:
Yes, we can make changes

6) If **file.txt** exists, Does the code successfully run ? ***1 point***

```
with open("file.txt", "r") as f:
  data = f.read()
  print(data)
```

- (selected) Yes
- No

Yes, the answer is correct.
Score: 1
Accepted Answers:
Yes

7) Which of the following are examples of Social Computing ? ***1 point***

- [ ] ChatGPT
- [x] Wikipedia
- [x] Quora
- [x] Twitch

No, the answer is incorrect.

8) What does the following code print for **n = 256**? ***1 point***

```
n = ?
k = 0
a = []
b = 0
while (n != 0):
  k = k + (n % 10)
  a.append(n % 10)
  n = n // 10
a.sort()
for i in a:
  b = b + i
if(b != k):
  print("PYTHON IS FUN")
else:
  print("PYTHON IS BORING")
```

- (•) PYTHON IS BORING
- ( ) PYTHON IS FUN

Yes, the answer is correct.
Score: 1

Accepted Answers:
PYTHON IS BORING

9) From the previous question, is **a.sort()** responsible for printing of either of the two possible sentences ? ***1 point***

- ( ) Yes, and the code may print ”PYTHON IS FUN”
- (•) No, it is purely dependent on variable n
- ( ) No, it is not dependent on a.sort(), and the code will never print ”PYTHON IS FUN”

No, the answer is incorrect.
Score: 0

Accepted Answers:
No, it is not dependent on a.sort(), and the code will never print ”PYTHON IS FUN”
