Course outline

About NPTEL ()

How does an NPTEL online course work? ()

Week 1 ()

Week 2 ()

Week 3 ()

- Lists Part 1 : Introduction (unit?unit=57&lesson=58)
- Lists Part 2 : Manipulation (unit?unit=57&lesson=59)
- Lists Part 3 : Operations (unit?

Thank you for taking the Week 3 : Assignment 3.

Week 3 : Assignment 3

Your last recorded submission was on 2025-02-05, 11:57 IST **Due date: 2025-02-12, 23:59 IST.**

1) Which of the following is/are **false** statement(s)? ***1 point***

- [x] Lists are fixed in size, they cannot store more than 1024 values
- [x] One can access element in list by using non-numeric indices
- [x] Iterating over lists is possible in Python
- [ ] We need to specify required size of list while creating a new list variable

2) In the below code -

```
n= ?
a = []
for i in range(n):
    l1 = []
    p = 0
    for j in range(i):
        l1.append(j)
    for k in l1:
        p+=1
    a.append(p)
k=0
for l in a:
    k+=l
print(k)
```

For what value of **n** does the program print **10** ?

10

1 point

3) From the previous question, for what values of **n** is the number **25** appended to list a. ***1 point***

unit=57&lesson=60)
- Lists Part 4 : Slicing (unit?unit=57&lesson=61)
- Loops and Conditionals : Fizzbuzz 01 (unit?unit=57&lesson=62)
- Loops and Conditionals : Fizzbuzz 02 (unit?unit=57&lesson=63)
- Crowd Computing - Just estimate 01 (unit?unit=57&lesson=64)
- Crowd Computing - Just estimate 02 (unit?unit=57&lesson=65)
- Crowd Computing - Just estimate 03 (unit?unit=57&lesson=66)
- Crowd Computing - Just estimate 04 (unit?unit=57&lesson=67)
- Crowd Computing - Just estimate 05 (unit?unit=57&lesson=68)
- Crowd Computing - Just estimate 06 (unit?unit=57&lesson=69)

- [ ] 25
- [ ] 24
- [x] 35
- [x] 32

4) What does the following code perform ? ***1 point***

```
def mystery(container):
    result = []
    for i in range(len(container)):
        if i % 2 != 0:
            result.append(container[i] * 4)
        else:
            result.append(container[i] * (-1)
    return result
```

- ( ) It converts any input list into a new list which is filled with some numbers which are always in increasing order
- ( ) It converts any input list into a new list such that at even indices, the value is a multiple of an even number and at odd indices, the value is either even or negative number
- (•) It converts any input list into a new list such that at odd indices, the value is always even number and at even indices, the value is negative
- ( ) It converts any input list into a new list, which follows no pattern

5) From the previous question, if the option - ***1 point***

It converts any input list into a new list such that at even indices, the value is a multiple of an even number and at odd indices, the value is either even or negative number.

is incorrect, Can you make changes to code such that it this option is always true for any input ?

- ( ) No, it is not possible to make such changes
- ( ) No, the option is already correct
- (•) Yes, we can make changes

6) If **file.txt** exists, Does the code successfully run ? ***1 point***

```
with open("file.txt", "r") as f:
    data = f.read()
    print(data)
```

- (•) Yes
- ( ) No

7) Which of the following are examples of Social Computing ? ***1 point***

- [ ] ChatGPT
- [x] Wikipedia
- [x] Quora
- [x] Twitch

- Permutations - Jumbled Words 01 (unit?unit=57&lesson=70)
- Permutations - Jumbled Words 02 (unit?unit=57&lesson=71)
- Permutations - Jumbled Words 03 (unit?unit=57&lesson=72)
- Theory of Evolution 01 (unit?unit=57&lesson=73)
- Theory of Evolution 02 (unit?unit=57&lesson=74)
- Theory of Evolution 03 (unit?unit=57&lesson=75)
- Theory of Evolution 04 (unit?unit=57&lesson=76)
- Week 3 Feedback Form : The Joy of Computing using Python!! (unit?unit=57&lesson=77)
- **Quiz: Week 3 : Assignment 3 (assessment?name=508)**
- Week 3: Programming Assignment 1 (/noc25_cs69/progassignment?name=510)
- Week 3: Programming

8) What does the following code print for **n = 256**? ***1 point***

```
n = ?
k = 0
a = []
b = 0
while (n != 0):
    k = k + (n % 10)
    a.append(n % 10)
    n = n // 10
a.sort()
for i in a:
    b = b + i
if(b != k):
    print("PYTHON IS FUN")
else:
    print("PYTHON IS BORING")
```

- (●) PYTHON IS BORING
- ( ) PYTHON IS FUN

9) From the previous question, is **a.sort()** responsible for printing of either of the two possible sentences ? ***1 point***

- ( ) Yes, and the code may print ”PYTHON IS FUN”
- (●) No, it is purely dependent on variable n
- ( ) No, it is not dependent on a.sort(), and the code will never print ”PYTHON IS FUN”

10) What does the code in question 8, calculate ?
Can you say what the values of k and b are if n = $245326785456 \times 10^{3359}$.
If values of k and b are different, enter 0, else enter value of k.

57

1 point

You may submit any number of times before the due date. The final submission will be considered for grading.
