# Week 5: Programming Assignment 1

Due on 2025-02-27, 23:59 IST

**The Mystery of Word Frequencies**

You are tasked with analyzing a mysterious message that was intercepted. The message seems to contain a series of repeated words, and the challenge is to count how many times each word appears. To solve this, you must write a Python program that takes a string of text and counts the frequency of each word.

Make sure your program is case-insensitive, as the secret message is a mix of upper and lower case letters.

After counting the occurrences of each word, display the results.

**Input Format:** A line of text

**Output format:** For all the unique words in the sentence, word: followed by frequency.

**Example :**

**Input :**
The quick brown fox jumped over the lazy dog. The quick fox jumped over the dog."

*Output*:

the: 3

quick: 2

brown: 1

fox: 2

jumped: 2

over: 2

lazy: 1

dog: 2

*Your last recorded submission was on 2025-02-24, 14:00 IST*

*Select the Language for this assignment.* Python3

Input_sentence=[i.lower() for i in input().split()]
frequency_of_word={}
for i in Input_sentence:
  if i not in frequency_of_word:
    frequency_of_word[i]=Input_sentence.count(i)

for a in frequency_of_word:
  print(f"{a}: {frequency_of_word[a]}")
```
