Week 6 : Assignment 6

The due date for submitting this assignment has passed.

Due on 2025-03-05, 23:59 IST.

Assignment submitted on 2025-03-03, 05:23 IST

1) If n is a positive integer, what is the output of the function given input n, ***1 point***

```
def mystery(n):
  if n <= 0:
    return 0
  return n + mystery(n - 1)
```

- (●) Sum of numbers from 1 to n
- ( ) Sum of numbers from 1 to n-1
- ( ) n-1
- ( ) n

Yes, the answer is correct.
Score: 1

Accepted Answers:
Sum of numbers from 1 to n

2) **Assertion (A):** If a recursive function doesn't have a base case, it may never stop. ***1 point***
Reason (R): Recursion means that a function calls itself.

- ( ) Both (A) and (R) are true, and (R) is the correct explanation of (A).
- (●) Both (A) and (R) are true, but (R) is not the correct explanation of (A).

Substitution Cipher -The science of secrecy (unit?unit=124&lesson=125)

Substitution Cipher -The science of secrecy 01 (unit?unit=124&lesson=126)

Substitution Cipher -The science of secrecy 02 (unit?unit=124&lesson=127)

Substitution Cipher -The science of secrecy 03 (unit?unit=124&lesson=128)

Tic Tac Toe - Down the memory Lane (unit?unit=124&lesson=129)

Tic Tac Toe - Down the memory Lane 01 (unit?unit=124&lesson=130)

Tic Tac Toe - Down the memory Lane 02 (unit?

(A) is true, but (R) is false.

(A) is false, but (R) is true.

Yes, the answer is correct.
Score: 1

Accepted Answers:
Both (A) and (R) are true, but (R) is not the correct explanation of (A).

3) What is the output of following code ? ***1 point***

```
def func(x):
  return x ** 2

def func(x, y=1):
  return x**2 + y

print(func(5))
```

Error

5

Yes, the answer is correct.
Score: 1

Accepted Answers:
26

4) In English, the letter ‘z’ usually appears far less often than most letters. Now imagine applying a Substitution Cipher to a large body of English text, where ‘z’ is replaced by ‘r’, and every other letter is also mapped to a unique letter. After encryption, which letter is likely to be the least frequent in the new text? ***1 point***

Hint: Search the internet for more info, if needed.

z

r

e

It is not possible to determine

Yes, the answer is correct.
Score: 1

Accepted Answers:
r

Recursion (unit?unit=124&lesson=135)
Recursion 01 (unit?unit=124&lesson=136)
Recursion 02 (unit?unit=124&lesson=137)
Recursion 03 (unit?unit=124&lesson=138)
Recursion 04 (unit?unit=124&lesson=139)
Recursion 05 (unit?unit=124&lesson=140)
Recursion 06 (unit?

5) If you have a large ciphertext produced by a simple substitution cipher on an English text, can you determine the original message by examining how often each letter appears? Hint: Search the internet for more info, if needed. ***1 point***

- (●) Yes, it can be done.
- ( ) No, it cannot be done.

Yes, the answer is correct.
Score: 1

Accepted Answers:
Yes, it can be done.

6) Suppose you suspect that a piece of ciphertext was produced using a simple sub-stitution cipher. Under which circumstances might frequency analysis fail to yield accurate results? ***1 point***

- [x] The ciphertext is short.
- [x] The ciphertext was encrypted with another method before encrypting with sub-stitution cipher.
- [ ] The ciphertext is very long.

Yes, the answer is correct.
Score: 1

Accepted Answers:
The ciphertext is short.
The ciphertext was encrypted with another method before encrypting with sub-stitution cipher.

7) If variable **dict_name** is a non-empty dictionary, what does dict name.values() re-turn? ***1 point***

- ( ) Returns nothing, but prints all the keys in the dictionary.
- ( ) Returns a list of all the keys in the dictionary.
- (●) Returns a list of all the values in the dictionary.
- ( ) Returns a list of all the items in the dictionary.

Yes, the answer is correct.
Score: 1

Accepted Answers:
Returns a list of all the values in the dictionary.

8) **Assertion (A):** A Caesar Cipher is a type of Substitution Cipher. ***1 point***
Reason (R): In a Caesar Cipher, each letter in the plaintext is replaced by a letter at a fixed shift in the alphabet.

- (●) Both (A) and (R) are true, and (R) is the correct explanation of (A).
- ( ) Both (A) and (R) are true, but (R) is not the correct explanation of (A).
- ( ) (A) is true, but (R) is false.
- ( ) (A) is false, but (R) is true.

Yes, the answer is correct.

Score: 1

Accepted Answers:
Both (A) and (R) are true, and (R) is the correct explanation of (A).

9) Which outcome generally follows from providing a proper base case in a recursive function? ***1 point***

- [x] The function returns a predefined result when the base condition is met.
- [x] It prevents infinite recursion and stops when a specific codition is met.
- [ ] It ensures recursion depth is always constant.
- [ ] It allows the function to keep calling itself indefinitely.

Yes, the answer is correct.
Score: 1

Accepted Answers:
The function returns a predefined result when the base condition is met.
It prevents infinite recursion and stops when a specific codition is met.

10) In a standard 3×3 Tic-Tac-Toe board, how many distinct winning lines (rows, columns, or diagonals) pass through the center square? ***1 point***

- ( ) 3
- ( ) 2
- ( ) 5
- (•) 4

Yes, the answer is correct.
Score: 1

Accepted Answers:
4
